Press Release – Dienst Verpackungstechnik GmbH

The DIENST standard cartoner makes it possible for everyone to enjoy a quick and delicious snack or meal at any time

What may be a perfect snack for some may be a complete meal for another. But one thing is clear - once you have tasted a delicious, typically Italian pizza you will always be tempted to have another one.

We recently supplied our long-term customer and renowned pizza baker from Italy with its twelfth reliable packaging machine. Additional machine projects are already underway to keep pace with the immense market demand for these tasty products.

Due to this great demand, food manufacturers need cartoning machines even more quickly that are not only reliable but also have a good price-performance ratio. For this reason DIENST has developed a new standard horizontal cartoner that is tailored to the industry and all its needs:

P3 Pizza cartoner

With the new design and all the features customers require as well as a wide range of standardised options, this machine fulfills almost every wish.

It includes full-length doors so that everything is easily visible and malfunctions can be rectified quickly and effectively. Less time is also required for maintenance work. We have installed a new infeed version with pneumatic overload function and automatic return of the pushers. This is also integrated in the standard version.

The P3 pizza cartoner can perfectly pack up to 160 incoming products per minute.

With a current delivery time of only four to five months at the most, DIENST is probably the fastest supplier of equipment for exactly this application on the market.

High quality for a long service life.

We have been the premium manufacturer in the horizontal cartoner sector in the food industry since 1988. We also produce top load and end of line machines. In addition, we supply customised solutions and are a recognised partner of internationally leading producers in the food and non-food industries.
