For a very exciting project in the field of Side Load and packaging of Canadian cookies into plastic trays, Dienst has developed and built a Horizontal Cartoner Type HK III ICS (Individual Carrier System) for Colonial Cookies Ltd. with its headquarters in Ontario, Canada.

A particular highlight was the great cooperation and hand-in-hand work with the company IPS – International Packaging Systems GmbH, a well respected and world-wide known top supplier of turn-key packaging lines, being a wholly-owned subsidiary of the well renowned Gerhard Schubert GmbH with headquarters in Crailsheim, Germany. This collaboration has led to a well received acceptance test.

Colonial Cookies Ltd. is a bakery manufacturer, founded in 1966 and belongs to the Weston Foods Family, a leading company in the North American baking industry.

The delivered packaging machine handles up to 180 packs per minute and is fully equipped with control- and servo drive solutions from Rockwell (Allan Bradley), a standardised application at DIENST and laid out to CSA standards. The challenge with this project was on the one hand the limited space and on the other the demand for high performances. But this task has been easily managed because of using proven technology.
